

Features

- High input voltage (up to 12V)
- Low power consumption
- High output current : 100mA ($P_d \leq 250\text{mW}$)
- Low voltage dropout
- Low temperature coefficient
- TO-92 & SOT-89 package

Applications

- Battery-Powered equipment
- Communication equipment
- Audio/Video equipment

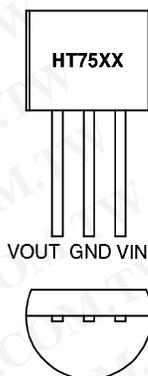

General Description

The HT75XX series is a set of three-terminal high current low voltage regulator implemented in CMOS technology. They can deliver 100mA output current and allow an input voltage as high as 12V. They are available with several fixed output voltages ranging from 2.4V to 9V. The advantages of CMOS technology give

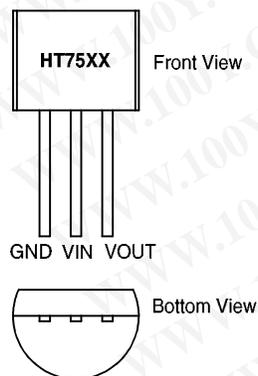

low voltage dropout and low quiescent current. Although designed primarily as fixed voltage regulator, these devices can be used with external components to obtain variable voltages and currents.

*Note: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only. Functional operation of this device at these or any other conditions above those indicated in the operational sections of this specification is not implied and exposure to absolute maximum rating conditions for extended periods may affect device reliability.
